## REPORT

TO THE URBAN DISTRICT COUNCIL OF

EGHAM, SURREY,

FOR

THE YEAR ENDING DECEMBER 31st, 1914,

BY

G. TREW CATTELL, M.D., D.P.H., MEDICAL OFFICER OF HEALTH.

#### LONDON:

#### TO THE

#### EGHAM URBAN DISTRICT COUNCIL.

GENTLEMEN,

In presenting to you the Report for the year 1914, I must first thank you for the leave of absence you have given me to enable me to serve the country during the present war. I also wish to thank Dr. Drew, who has kindly acted as Deputy M.O.H. during my absence, and Mr. W. Simpson, the Sanitary Inspector, who has done all he possibly can to make things run smoothly. I have only been able to obtain four days leave from my post to enable me to compile this report, so I must ask the indulgence of the Council for any slight inaccuracy there may be.

I am, gentlemen,

Your obedient servant,

G. T. CATTELL, T.D.,
COLONEL,

Medical Officer of Health.

### Egham Urban Sanitary District,

STATISTICAL DETAILS OF CENSUS, 1911.

Area of District	• • • • • • •	7,786 acres
Land, 7,621 acres.	Inland Wate	er, 165 acres.
Population  Nett Population after deducting i		
Occupied Houses		2,782
Giving a density of occupation of 4	5 per house a	nd about five per acre.

Geological Character.—East of the South-Western Railway the district is on the river drift gravels, to the west of this line it is mainly on the Bagshot formation except between Englefield Green and Virginia Water, where the London clay prevails.

Population.—In the last ten year census period 1901-1911 there was an average increase of the population of 65.6 persons per annum. In the year 1914, the total number of deaths registered in the district of Egham was 142, of these 23 were persons temporarily living in the district, but actually residents of other places. These mostly occurred at the Holloway Sanatorium. This number has to be deducted and the deaths of 20 persons belonging to Egham, who died while staying away from home, added. Thus making the nett deaths for the year 1914, 139.

During the year 214 births were registered, which is the lowest number that has ever been recorded, the number of births over deaths being only 75. Having regard to this very small number of births and the fact that a large number of the younger persons of the district migrate every year, chiefly in search of work (the district being non-industrial), the increase in population is very small. This is also shown by the number of empty houses to be seen. The estimated population to the middle of the year is 12,694.

Housing.—The district is very well supplied with houses of all classes. The dwellings of the working classes are on the whole about the average. There are many vacant so that there is no lack of choice in selecting a new home. All the houses in the district are in a substantial state of repair. Only twelve new houses were erected during the past twelve months.

STATEMENT required by Article V. of the housing (Inspection of District) Regulations, 1910, in regard to the inspection of dwelling-houses under Section 17 of the Housing, Town Planning, &c., Act, 1909.

•	
Number of dwelling-houses inspected under and for the purposes of the Section	.e 90
Number of such dwelling-houses which were considered to be in a state s dangerous or injurious to health as to be unfit for human habitation	8
Number of dwelling-houses in respect of which representations were made to the local authority with a view to the making of closing orders	o 8
Number of dwelling-houses in respect of which closing orders were made be the local authority	у 8
Number of dwelling-houses the defects in which were remedied without the making of closing orders	ie 52
Number of dwelling-houses which, after the making of closing order, were made fit for human habitation	e —
General Character of the defects found to exist in the dwelling-house inspected	e –
In the majority of houses: Papering and whitening ceilings, roofs an gutters repaired and wood work painted.	d

Sewerage and Scavenging.—Dry scavenging is carried out by the Authority. In cases where difficulty arises in the emptying of pail closets this has also been undertaken by the Council. No part of the district is sewered. The approximate number of the various forms of closet is as under:—

Privies ... ... 30
Earth Closets ... 40
Cistern Flushed Water Closets ... 1,240
Hand Flushed ,, ,, ... 1,445

Water Supply.—The South-West Suburban Water Company supply the greater part of the district. The analytical results of the examination of this water vary very much in quality from time to time. The outlying portions of the district rely almost entirely on wells. Fourteen samples were submitted to analysis, four of which were condemned, and other supplies substituted.

Food —Fourteen samples of milk were submitted to analysis, one of which was found to be adulterated. Ten samples of butter were also analysed, of which one was found to be adulterated.

Isolation Hospital.—A great deal of useful work has been carried out at this institution during the year. The building is well maintained and the staff carry out their duties in a zealous and efficient manner. During the year 12 cases of diphtheria and 14 cases of scarlet fever have been treated in the hospital.

Notifiable Infectious Disease.—The number of cases of infectious disease is less than in the preceeding year. The subjoined table gives the figures for the year and those of 1912 and 1913—

			1912.		1913.		1914.
Scarlet Fever	• • •	• • •	25	4	I 4	• • •	14
Diphtheria	• • •	- • •	ΙΙ		2 I	• . •	14
Erysipelas	• • •	* * *	7	• • •	13		ΙI
Enteric Fever	• • •		-	• • •	2		3
Puerperal Feve	er			• • •	I		5
					<del></del>		
			43		5 I		47

Tuberculosis.—Twenty cases of pulmonary tuberculosis were notified during the year, and eight cases of other forms of tuberculosis were also noted.

Enteric Fever.—Two cases of patients occurred at the Sanatorium and were treated there. It is not known how they occurred, but the first case was probably imported and the other contracted the disease from contact. The third case contracted the disease at Portsmouth.

Scarlet Fever.—The number of cases of this disease notified is the same as in 1913. They were distributed over the district and were mostly of a mild character. No fatal case was registered.

Non-Notifiable Infectious Diseases. — Whooping Cough.—There was an outbreak of this disease among the children at the girls' cottage home in June, a large number being affected. These all attended Englefield Green School, where the disease was very prevalent. No death was registered.

CHICKEN Pox.—A considerable number of cases occurred in the summer of the year among the school children at Englefield Green and Virginia Water.

Schools.—The Elementary Schools in the district were frequently inspected, and found invariably to be clean, well maintained and with a good supply of water.

Sanitary Work.—Mr. W. Simpson, the Sanitary Inspector, reports having visited 310 premises during the year.

Twelve complaints were received and thirty detailed inspections carried out.

Sixty-nine cases of nuisances were discovered. These related to—

House drains	• • •	• • •	5 I
Bakehouses	• • •		I
Overcrowding	• • •	•••	3
Dilapidated houses	• • •	• • •	6
Foul Ditches	• • •	• • •	4
Foul Streams	• • •	• • •	4

Nuisances were abated on 51 premises, 25 formal notices were served, but in no case was it necessary to institute legal proceedings.

Thirty premises were disinfected after infectious disease.

All the premises used for the preparation of food in

tended for human consumption were regularly and frequently inspected both by the Medical Officer of Health and the Sanitary Inspector. These were generally found to be well kept, clean, and in every way satisfactory. A few minor defects were pointed out and subsequently remedied by the owner or occupier concerned. The slaughterhouses were frequently visited while work was being done. No case of tuberculosis in meat or cattle was reported. The milk supply in the district is good in quality and ample in quantity.

Cowsheds, dairies and milkshops were visited frequently during the year, and found to be well kept and clean.

Workshop and Factory Act.—The district is essentially residential in character and no industrial works are situated in Egham.

Twenty-three workshops and eight work places are on the register and were frequently inspected. In every case but one they were found to be clean, well kept and in accordance with the act.

Vital Statistics.—The number of births registered during the year was 214. Males, 120; females, 94. It will be seen that the birth rate is steadily declining. Seven illegitimate births were registered.

One hundred and forty-two deaths were registered in the district, twenty-three of whom were non-residents. Twenty persons belonging to Egham died away from home, making the nett deaths 139.

The annual rate per 1,000 living—

	Births.	Dea	Deaths under 1 year.	
		Crude.	Standardised	per 1,000 births.
England and Wales	23.6	13.9	13.6	105
97 great towns (including London) 145 smaller towns England and Wales (less	24°9 23°6	14.6 12.8	14.9 12.9	113
the 242 towns)	21.9	13.3	I 2.5	93
London Egham	24·6 16·9	14 <sup>-</sup> 4 11 <sup>-</sup> 2	14.4 110	103 65

From the above table it will be noticed that both the birth and death rates are far below the average for the country.

Infantile Mortality.—Fourteen deaths of infants under one year of age were registered, this being one less than last year. Although the summer was hot and dry not a single death occurred from Diarrhæa or Enteritis.
